

A

Discontinuity at threshold = 0.061 with std. err. = 0.046.

B

Discontinuity at threshold = -0.148 with std. err. = 0.097.

Fig. 6. Inflow effects due to REBP: men. Age: relative inflow is the ratio of the density of age in the treated region to the density of age in the control region. Border: relative inflow is the ratio of the density of distance to border in the age bracket 50-53 years to the corresponding density in the age bracket 46-49 years. Sample restricted to inflow into unemployment in the period 8/1989 until 7/1991 (during REBP).
