

Fig. 9. Inflow effects due to REBP: women. Age: relative inflow is the ratio of the density of age in the treated region to the density of age in the control region. Border: relative inflow is the ratio of the density of distance to border in the age bracket 50–53 years to the corresponding density in the age bracket 46–49 years. Sample restricted to inflow into unemployment in the period 8/1989 until 7/1991 (during REBP).
